

KEY TAKEAWAYS

Reimagining Sustainability

Professor Jeffrey Sachs discussed key aspects of reimagining sustainability, emphasising the need for national action, business alignment, and individual learning.

1. Companies should align their business models with global commitments like the Sustainable Development Goals, the Paris Climate Agreement, and the Biodiversity Convention.
2. Governments should focus on sustainable development planning, including universal education, health coverage, and energy transformation, rather than short-term political narratives.
3. Professor Sachs emphasises the need for multilateralism and cooperation among major powers, especially in times of war and global tension.
4. Individual mindset shift is vital to create a sustainable future, which is why Professor Sachs advocates lifelong learning in scientific, technological, and ethical knowledge areas.
